**Subject:** RE: Water Appropriations Applications

Brad,

Based on my review of prior communications regarding the below, the State-referenced applications all appear to be south of 71<sup>st</sup>. While additional pumping down-gradient of the plume certainly stresses our ability to manage groundwater, I don't think that we have any additional information to provide during the final comment period. Thanks for forwarding.

fyi, I also cc'd David Anderson, whom I look forward to introducing some time since he will be taking lead as the Glenn Springs project manager for Wichita corrective action following some appropriate transition. I've worked with Dave for many years, and as both a P.E. and P.G. and all-around smart and experienced guy, he is well-suited to take the reins for us. This is part of work load balancing within Oxy and additional assignments I have as well, but I'll certainly still be around and look forward to hearing about continued progress with the site. For now, communications should continue to route to me, however I wanted to provide you some heads-up.

In any case, we certainly appreciate EPA's collaborative efforts to-date and going forward! Thanks.

Juan

Juan, Here's a letter I just got today from the KDA that I thought you'd like to see. Let me know what you think, and whether you want to submit more comments on the pending applications during the final comment period.
